WORK EXPERIENCE

AI / ML Intern | Hubo Web *(Feb 2025 -May 2025)*

- Gained practical experience building RESTful APIs and embedding advanced AI models into efficient, production-ready backend systems.
- Developed AI-driven Django web apps using pre-trained transformers like Whisper and GPT for speech-to-text and prompt-based text generation.
- Utilized pre-trained transformers (GPT, Whisper, BLIP, CLIP, Stable Diffusion) to power intelligent features

AI / Data Science Trainee | Knowledge Streams | SIC *(Oct 2024-Dec 2024)*

- Gained hands-on experience in data cleaning, preprocessing, implementing classical machine learning models, and developing deep neural networks.
- Analyzed mathematical foundation of machine learning models and explored various loss functions
- Optimized model accuracy using GridSearchCV, optimizers, and diverse loss and activation functions.

Data Science Boot Camp | ML1

(Dec 2023-Mar 2024)

- Implemented ML/DL algorithms and techniques like feature engineering scaling and normalization.
- Tackled industry-based problems using real-world datasets, which significantly enhanced logic building, problem-solving, and practical data science skills.

Artificial Intelligence Training| NAVTTC *(Mar 2023-Jun 2023)*

- Gained in-depth understanding of AI fundamentals, covering machine learning, statistics, and linear algebra
- Applied core NLP techniques such as tokenization, lemmatization, BoW, and NER for effective text analysis.

PROJECTS

Trounce-AI

- Built an AI-based Django application that converts user-uploaded audio files into accurate transcripts and generates engaging captions and hashtags
- Applied Whisper for speech recognition and GPT models for caption generation using Django RESTful APIs.
- Demonstrated end-to-end backend development by integrating pre-trained transformers into a scalable, user-friendly AI system.

Sentimental Analysis of Amazon Customer Reviews

- Automated classification of Amazon reviews into positive, negative, and neutral categories
- provide quick customer sentiment insights for actionable product improvements
- Utilized NLP techniques and pre-trained model to process and analyze large-scale review data

CORE SKILLS

Programming Languages: C++, Python, HTML, CSS
Developer Tools: Google Colab, Jupyter Notebook, VSCode, Atom, PyCharm
Libraries & Frameworks: Pandas, Numpy, Matplotlib, Seaborn, Scikit-Learn, Tensor Flow, Keras, OpenCV,Pillow, NLP, NLTK, RegEx, Django
Databases: MySQL

EDUCATION

Minhaj University Lahore *(Sep 2020 – Sep 2024)*
Computer Science | AI, Data Science
